

WEST VIRGINIA LEGISLATURE

2021 REGULAR SESSION

Introduced

House Bill 2249

BY DELEGATE FLEISCHAUER

[Introduced February 10, 2021; Referred to the

Committee on Energy and Manufacturing]

1 A BILL to amend the Code of West Virginia, 1931, as amended, by adding thereto a new article,
2 designated §24-2I-1, §24-2I-2, §24-2I-3, §24-2I-4, and §24-2I-5, all relating to permitting
3 customers and developers to enter into solar power purchase agreements; setting forth
4 the benefits, purpose, and considerations; and granting rule-making authority.

Be it enacted by the Legislature of West Virginia:

ARTICLE 2I. SOLAR POWER PURCHASE AGREEMENTS.

§24-2I-1. Solar power purchase agreement.

1 A solar power purchase agreement (PPA) is a financial agreement where a developer
2 arranges for the design, permitting, financing, and installation of a solar energy system on a
3 customer's property at little to no cost. The developer sells the power generated to the host
4 customer at a fixed rate that is typically lower than the local utility's retail rate. This lower electricity
5 price serves to offset the customer's purchase of electricity from the grid while the developer
6 receives the income from these sales of electricity as well as any tax credits and other incentives
7 generated from the system. PPAs typically range from 10 to 25 years and the developer remains
8 responsible for the operation and maintenance of the system for the duration of the agreement.
9 At the end of the PPA contract term, a customer may be able to extend the PPA, have the
10 developer remove the system or choose to buy the solar energy system from the developer.

§24-2I-2. Benefits of solar power purchase agreements to customers.

1 (a) No or low upfront capital costs. -- The developer handles the upfront costs of sizing,
2 procuring, and installing the solar PV system. Without any upfront investment, the host customer
3 is able to adopt solar and begin saving money as soon as the system becomes operational.

4 (b) Reduced energy costs. -- Solar PPAs provide a fixed, predictable cost of electricity for
5 the duration of the agreement and are structured in one of two ways. Under the fixed escalator
6 plan, the price the customer pays rises at a predetermined rate, typically between 2% - 5%. This
7 is often lower than projected utility price increases. The fixed price plan, on the other hand,

8 maintains a constant price throughout the term of the PPA saving the customer more as utility
9 prices rise over time.

10 (c) *Limited risk.* -- The developer is responsible for system performance and operating
11 risk.

12 (d) *Better leverage of available tax credits.* -- Developers are typically better positioned to
13 utilize available tax credits to reduce system costs. For example, municipal hosts and other public
14 entities with no taxable income would not otherwise be able to take advantage of the Section 48
15 Investment Tax Credit.

16 (e) *Potential increase in property value.* -- A solar PV system has been shown to increase
17 residential property values. The long-term nature of these agreements allows PPAs to be
18 transferred with the property and thus provides customers a means to invest in their home at little
19 or no cost.

§24-2I-3. Purpose.

1 Solar power purchase agreements provide a means to avoid the upfront capital costs of
2 installing a solar PV system as well as simplifying the process for the host customer. In some
3 states, however, the PPA model faces regulatory and legislative challenges that would regulate
4 developers as electric utilities. A solar lease is another form of third-party financing that is very
5 similar to a PPA, but does not involve the sale of electric power. Instead, customers lease the
6 system as they would an automobile. In both cases, the system is owned by a third party while
7 the host customer receives the benefits of solar with little or no up-front costs. These third-party
8 financing models have quickly become the most popular method for customers to realize the
9 benefits of solar energy. Colorado, for example, first entered the market in 2010, and by mid-2011
10 third-party installations represented over 60% of all residential installations and continued to rise
11 to 75% through the first half of 2012. This upward trend is evident throughout states that have
12 introduced third-party financing models.

§24-2I-4. Power purchase agreements considerations.

1 (a) Solar renewable energy credits. - Solar renewable energy credits (SRECs) show that
2 a certain amount of electricity was produced using solar energy. They are typically bought and
3 sold by load serving entities (typically regulated utilities) to meet obligations associated with state-
4 level renewable energy standards. SRECs are also used by consumers who voluntarily purchase
5 them for marketing claims or other use. Most often in PPAs, SRECs are owned by the developer.
6 When entering into a PPA, it will be important for a customer to clearly understand who owns and
7 can sell the SRECs generated from the PV system, the risks attendant to SREC ownership, and
8 the tradeoffs with respect to PPA price.

9 (b) How to finance. -- While both third-party financing models provide numerous benefits,
10 purchasing a PV system outright has its own benefits. Anyone considering installing a solar PV
11 system should consider each of the financing options available to find the best fit.

12 (c) Site upgrades. -- While the developer is responsible for installation, operation and
13 maintenance of a solar PV system, the host customer may need to make investments in their
14 property in order to support the installation of the system, lower the cost of installation or to comply
15 with local ordinances. This might include, for example, rooftop repairs or trimming trees that shade
16 the PV system.

17 (d) Possible higher property taxes -- While a PV system may help to raise the site's
18 property value, there is also a potential increase in property taxes when the property value is
19 reassessed.

§24-2I-5. Effective date; rule-making.

1 (a) Effective January 1, 2022 customers and developers may enter into PPAs on terms
2 and conditions acceptable to all parties.

3 (b) The Public Service Commission shall propose rules for legislative approval in
4 accordance with §29A-3-1 et seq. of this code to serve as guidelines and assistance in

5 implementing the intent of this article.

NOTE: The purpose of this bill is to permit customers and developers to enter into solar power purchase agreements. The bill sets forth the benefits, purpose, and considerations. The bill grants rule-making authority.

Strike-throughs indicate language that would be stricken from a heading or the present law and underscoring indicates new language that would be added.
